Timber Boarding

total timber solutions - www.svw2000.co.uk

*Timber boarding products from **Severn Valley Woodworks** provide so many design options for use within building and outdoor projects.*

All profiles are machined and manufactured by ourselves from high quality kiln dried softwoods and are available in various lengths from 3m to 6m.

Our boarding timbers can be supplied either untreated or preservative pre-treated with TANALITH® E wood preservative to help ensure an extended and low maintenance service life.

Our standard range of designs is detailed on the following pages. However, we can also manufacture specific requirements to order.

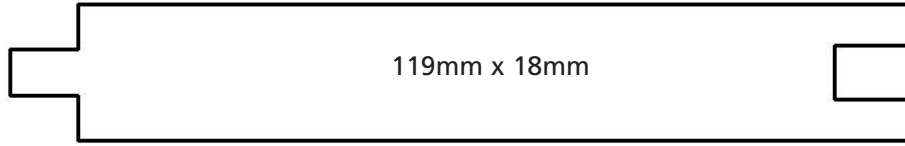

PRESSURE TREATED TIMBER
